

Abstract of the Disclosure

A method, apparatus and computer program product are provided for implementing web based document printing. A print index is obtained. User selected uniform resource locators (URLs) in the print index are identified. The URLs in the print index are sequentially printed. The print index stores a list of user selected uniform resource locators (URLs) to be printed. A web based printing program utilizes the stored print index for printing a document including the list of user selected uniform resource locators (URLs).

Figure 1 consists of 12 histograms arranged horizontally, labeled x_1 through x_{12} . Each histogram shows the frequency (count) of non-zero elements in the vector x_k . The x-axis for each histogram is labeled x_k and ranges from 0 to 10. The y-axis is labeled 'count' and ranges from 0 to 10. The distributions are roughly bell-shaped and centered around 5, with the peak count increasing from 10 for x_1 to 12 for x_{12} .
